

REMARKS

In response to the Office Action mailed 5 September 2006, Applicant has amended claims 1 – 3, 9, 11, and 13 – 15. Claims 1 – 17 are currently pending in the application.

The above amendments were made to clarify the claims and address the problems pointed out by the examiner. Claim 1 now more clearly applies to a method that has at least two known control points, and which generates additional control points by adjusting test points until a visual match is made. In other words, once a test point has been matched, it then becomes a known control point for the next iteration of the method. This approach gives an improved result in comparison with prior art methods.

The claims amendments are believed to maintain the original scope of the invention, while correcting all of the noted deficiencies with respect to formal matters. This correction now makes the scope of the claims more easily understood. Applicant respectfully requests consideration of the claims on the merits.

Respectfully submitted,

Kenneth C. Hill, Reg. No. 29,650
